

HEXAGON

Integrated Solution for Utility Detection and Mapping

Alberto Bicci / Katherine Broder

Individual data collected in underground utility asset detection and mapping

Cable Locator surveys

Asset and cartography survey

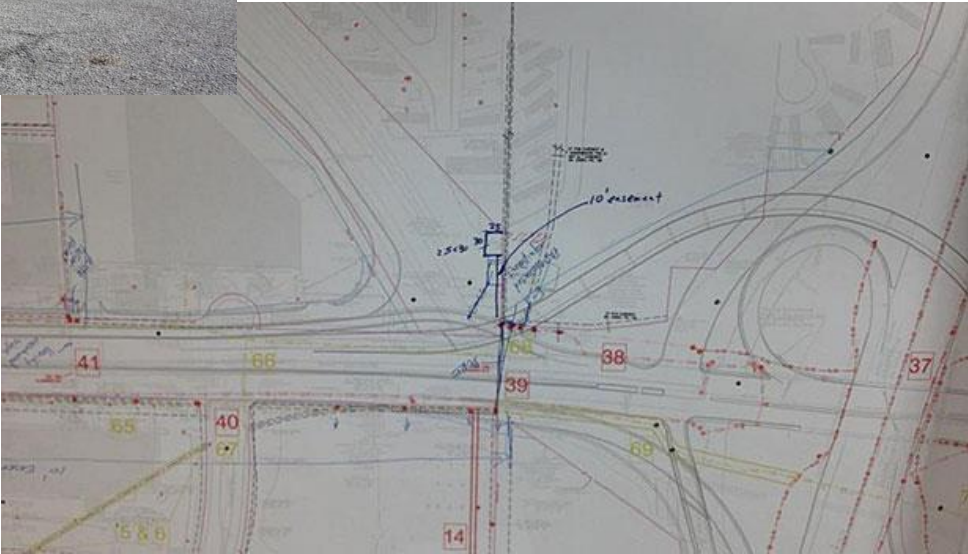

3D reality reconstruction

GPR surveys

Cartography restitution

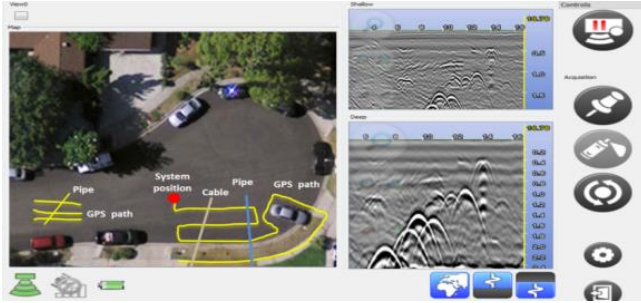

Visual inspection

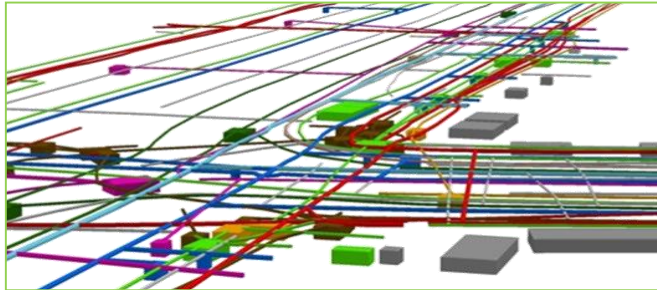

**Clear need for accurate
highly reliable
up to date information -
usable immediately**

Three main applications of underground utility reality capture

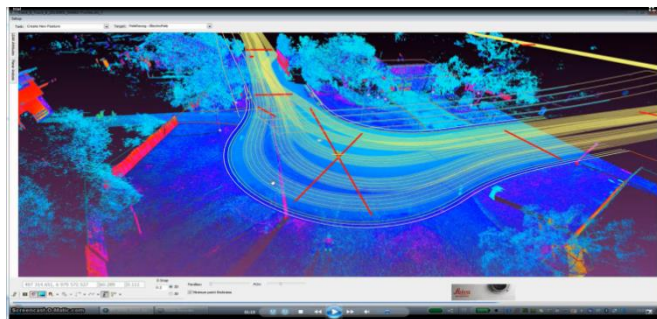

- **Utility detection**

- **On site direct detection** of particular services, typically marked with spraypaint on the ground

- **Utility mapping**

- **Reconstruction** of all the underground utilities in more or less extended areas – relatively positioned

- **Complete asset reconstruction**

- **Fully Georeferenced 3D reconstruction** of above- and underground assets

High Quality Precision Sensors

Detection

Positioning

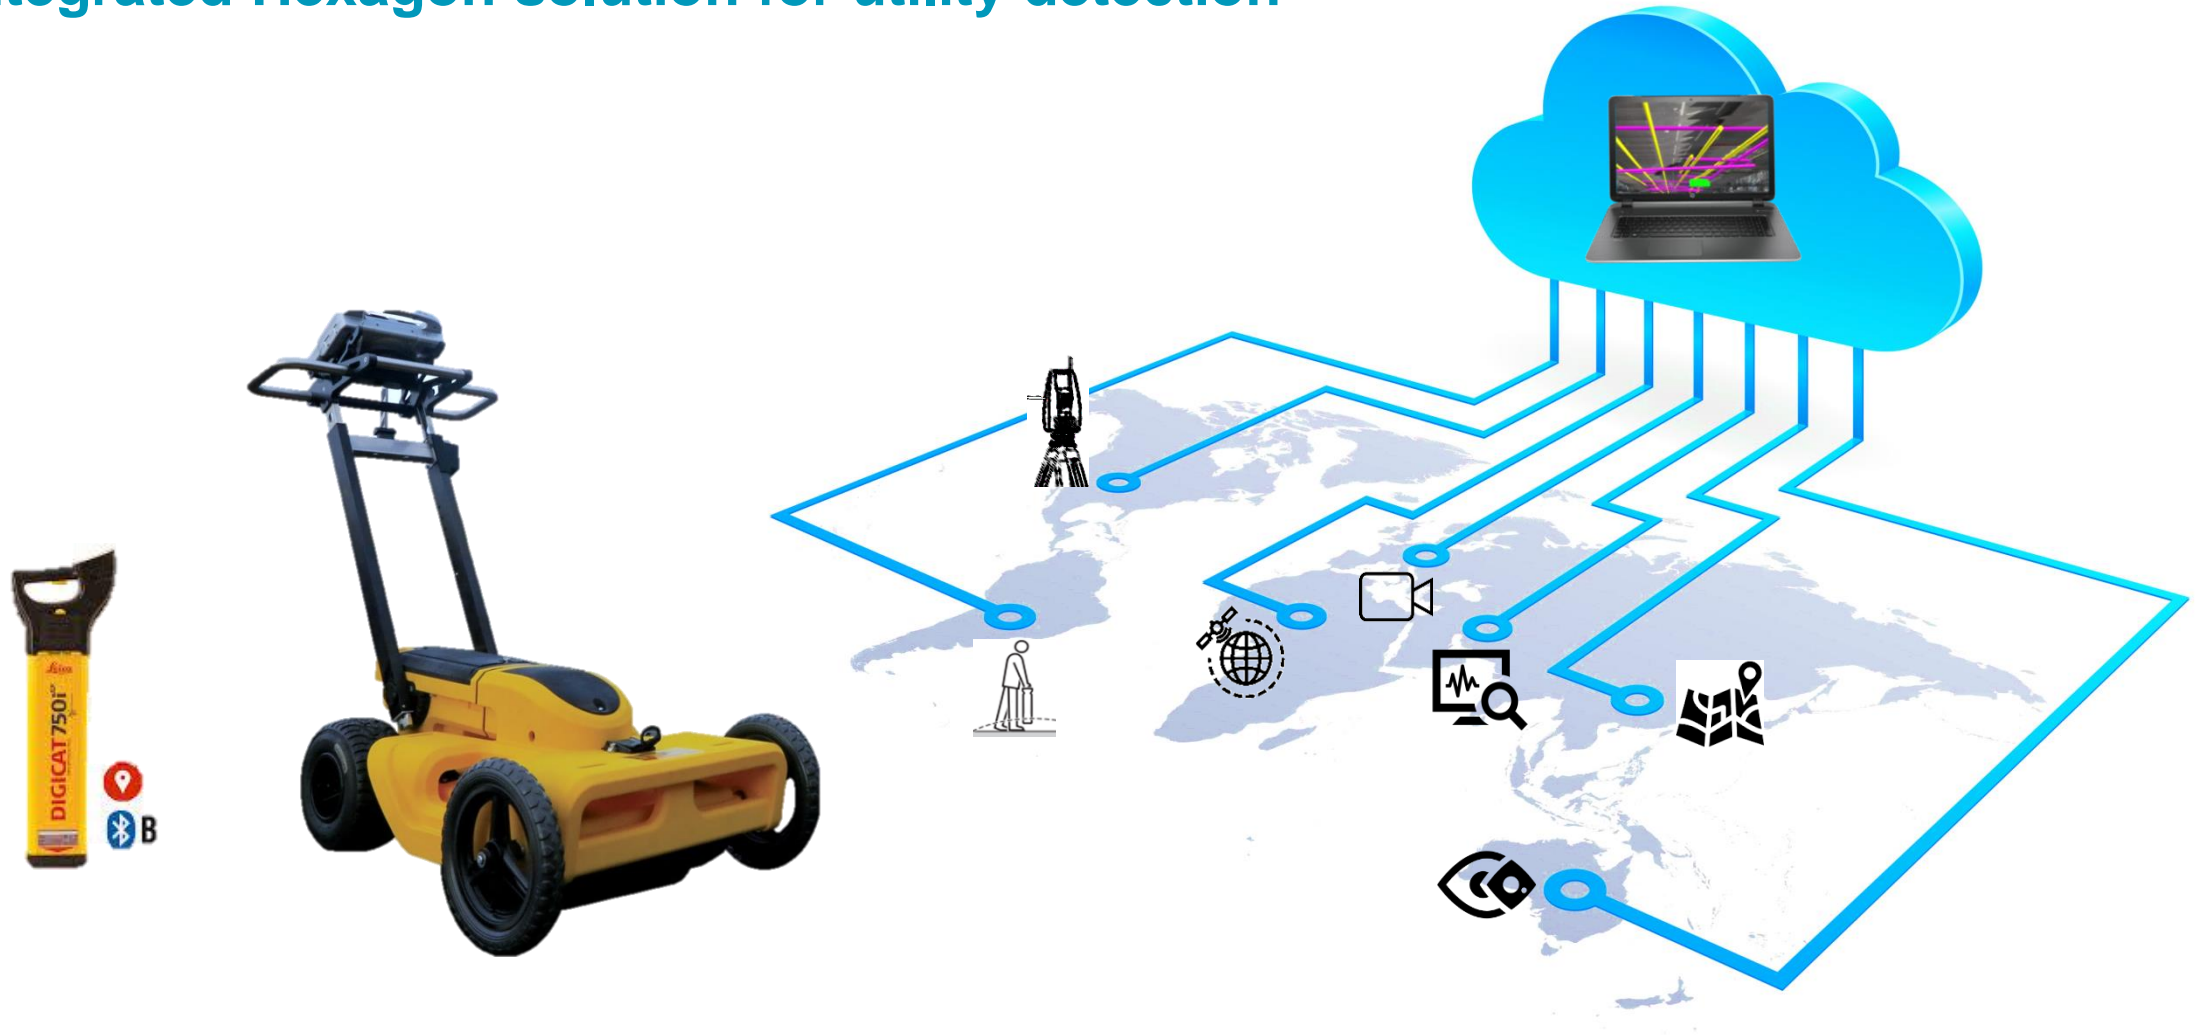

Software and Data Analytics

Unique Value Proposition in the Market

Fully integrated Hexagon solution for utility detection

Streamlined process from field to office and back covering the entire workflow

Fully integrated Hexagon solutions for utility detection and mapping

- when it has to be **right**

Fully integrated Hexagon solutions for utility detection and mapping

Streamlined process from field to office covering the entire workflow

Utility Mapping with Big Data Analytics

Fully integrated Hexagon solutions for utility detection and mapping

Streamlined process from field to office covering the entire workflow

Smart Data Analytics (post processing) tailored to customer needs

Capture accurate data and convert it into actionable information immediately

Snapshot of vision for visualization

Facilitate end user in data interpretation of the buried utilities

Real time tomography of the underground utility network.

Camera for visual information of recorded soil objects *

Augmented Reality to visualize underground objects in augmented reality*

Hexagon complete portfolio for utility detection and mapping
